

TECHNICAL ARCHITECTURE & COMPREHENSIVE PRODUCTION REPORT

PROJECT IDENTIFIER: Systemic Development & Enterprise Deployment of K.AQSA E-Commerce Platform

CANDIDATE NAME: Aqsa Sanaullah

ACADEMIC MATRIX: Bachelor of Science in Computer Science (BSCS)

ENGINEERING TRACK: Full Stack Web Developer & Enterprise Systems Architect

EVALUATION ENGINE: Cloudexify Summer Internship Core Lifecycle

PROJECT REVISION: v2.4.1 (Production Baseline)

E-COMMERCE WEBSITE REPORT

PROJECT TITLE

K.AQSA E-Commerce Website

INTRODUCTION

The K.AQSA E-Commerce Website is a web-based online shopping system developed using ASP.NET Core MVC, Entity Framework Core, and SQL Server. The system allows users to browse products, add products to the cart, manage wishlists, and place orders using Cash on Delivery (COD).

The project also provides an administration panel where the administrator can manage products, categories, users, and customer orders. The main objective of the project is to provide a simple, secure, and user-friendly online shopping experience.

OBJECTIVES

The objectives of this project are:

- Develop a complete online shopping website.
- Allow users to register and login securely.
- Display products with detailed information.
- Allow users to add products to the shopping cart.
- Implement wishlist functionality.
- Complete checkout using Cash on Delivery.
- Store all customer and order information in SQL Server.

Follow MVC Architecture for better code organization.

TOOLS AND TECHNOLOGIES

SYSTEM MODULES

The website contains the following modules:

User Authentication

Product Management

Shopping Cart

Wishlist

Checkout System

Order Management

Admin Dashboard

WORKING PROCEDURE

Home Page Landing Interface

Home Page

The Home Page is the primary interface of the K.AQSA Electronics E-Commerce Store. It provides users with an attractive introduction to the website and highlights the main purpose of the online shopping platform. The design follows a modern user interface with a dark navy theme combined with golden accent colors, creating a premium appearance suitable for an electronics brand.

At the top of the page, a responsive navigation bar allows users to access different sections of the website including Home, Products, Wishlist, Login, and Registration. The navigation bar remains clean and easy to understand, improving usability on both desktop and mobile devices.

The hero section displays the company title "K.AQSA Electronics" along with a promotional message describing the available electronic products. A countdown timer has been implemented using JavaScript to create urgency for customers by indicating the remaining duration of the promotional event.

A large "Shop Now" button is positioned below the timer, enabling visitors to quickly navigate towards the product catalog. The combination of typography, spacing, colors, and animations improves the overall visual experience while encouraging customer engagement.

SHOP NOW

Featured Products Section

Featured Products

Below the hero section, the website displays a collection of featured electronic products generated dynamically through JavaScript. Instead of manually writing HTML for every product, the application loads product information from the data.js file.

Each product card includes:

Product Image

Product Category

Product Name

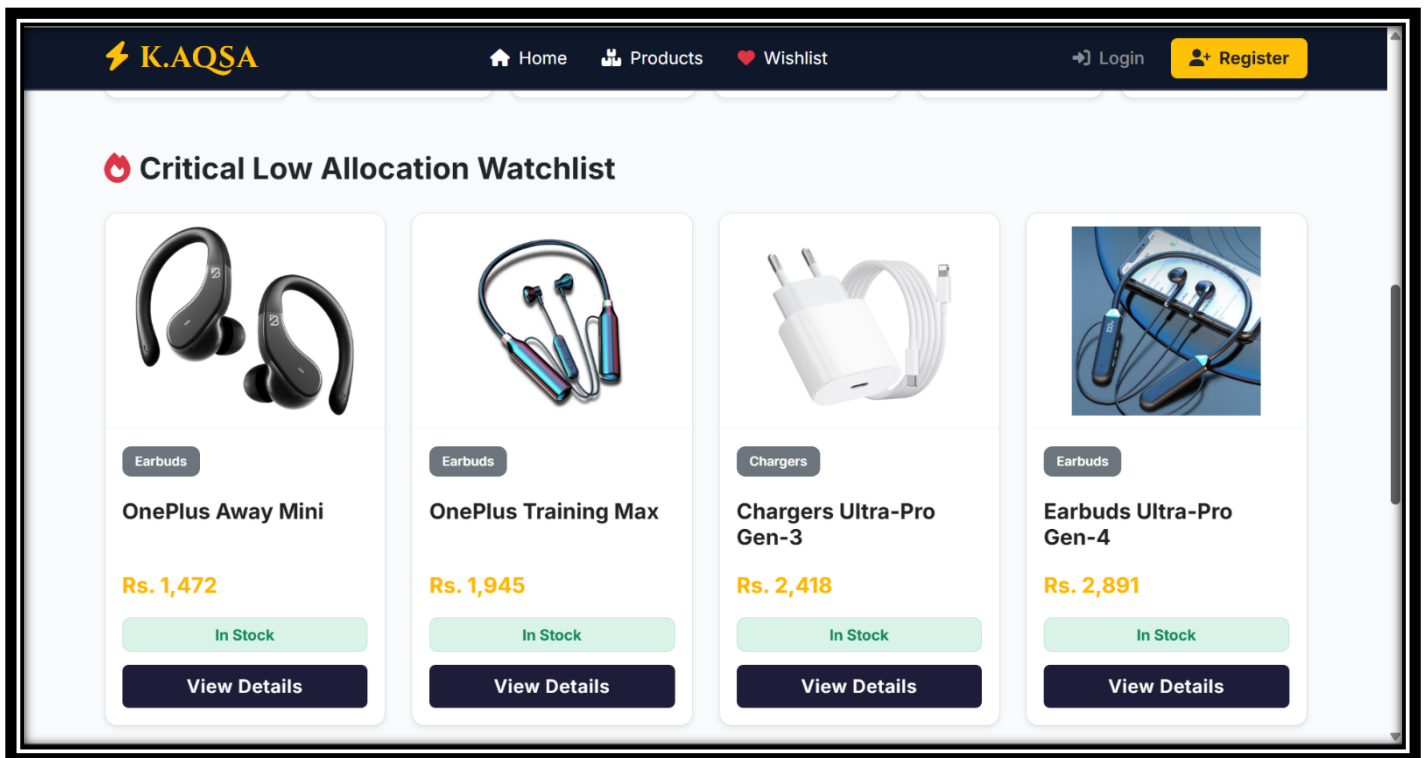

Product Price

Stock Availability

View Details Button

The product cards are designed using Bootstrap cards together with custom CSS styling. Hover animations increase user interaction while maintaining a clean professional layout.

The responsive grid automatically adjusts according to different screen sizes, ensuring proper display across desktop, tablet, and mobile devices.

Why Shop With Us Section

Why Shop With Us

The "Why Shop With Us" section presents the key benefits offered by the K.AQSA Electronics Store. Rather than only

displaying products, this section builds customer confidence by highlighting the services provided by the business.

Four major service advantages are displayed:

100% Genuine Products

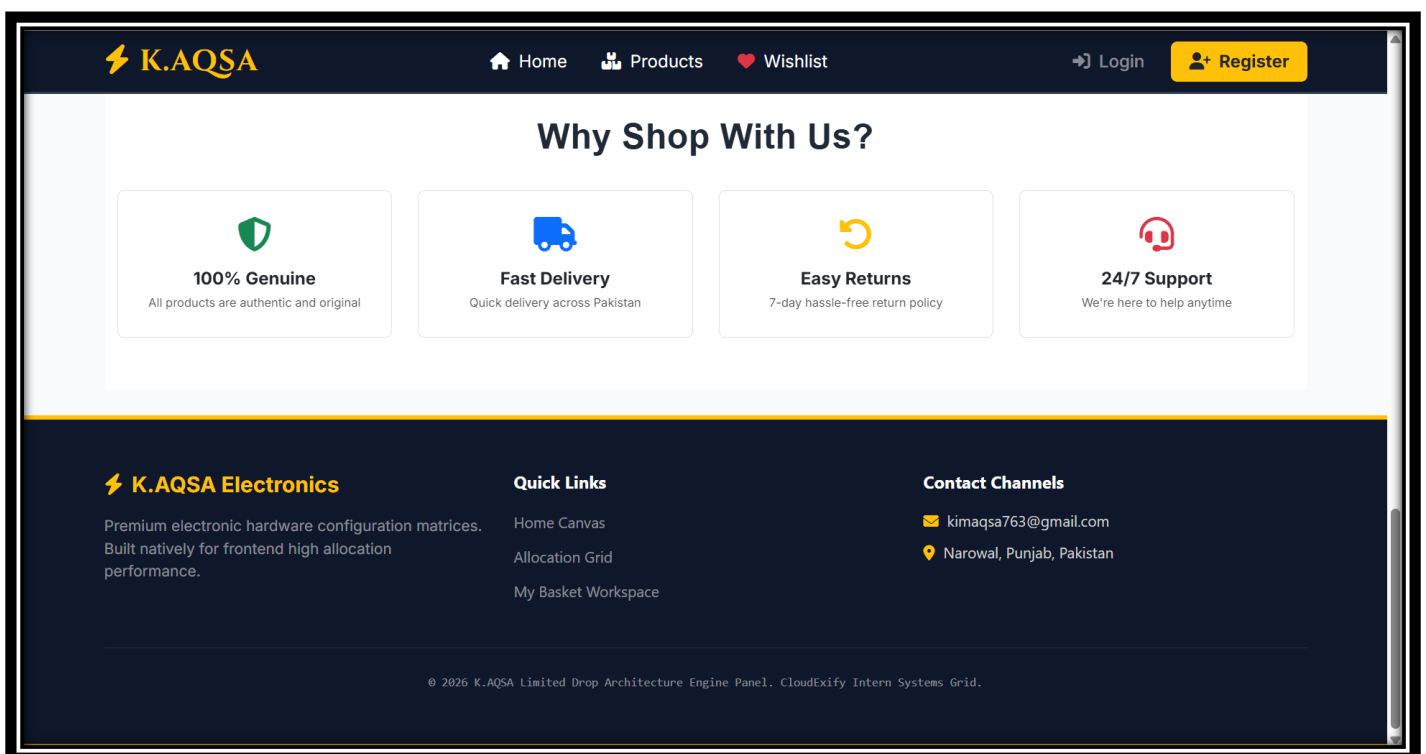

Fast Delivery Across Pakistan

Easy Return Policy

24/7 Customer Support

Each service is represented using Font Awesome icons and Bootstrap cards. The layout is symmetrical and visually balanced, helping visitors quickly understand the advantages of purchasing from the platform.

This section improves customer trust and increases the likelihood of successful purchases.

Website Footer

Footer Design

The footer is placed at the bottom of every page and provides essential business information. It includes company branding, navigation links, and contact details.

The footer contains:

Company Name

Business Description

Quick Navigation Links

Email Address

Physical Location

Copyright Information

The dark background with golden accents maintains visual consistency with the rest of the website while presenting important information in an organized format.

User Registration Page

User Registration Module

The registration module enables new customers to create an account before accessing personalized shopping features. The registration form is designed using Bootstrap form controls combined with custom CSS.

The form collects:

First Name

Last Name

Username

Email Address

Password

Confirm Password

JavaScript validates all fields before storing user information in Local Storage. Password confirmation ensures that users enter matching credentials, reducing registration errors.

The responsive form layout improves accessibility while maintaining a professional appearance.

K.AQSA Home Products Wishlist Login Register

CREATE ACCOUNT

Login Page

User Authentication

After successful registration, users can securely log into the application using their registered username and password.

The login system performs validation before allowing access to authenticated features such as:

Shopping Cart

Wishlist

Checkout

User Profile

Session information is maintained using browser Local Storage, allowing users to remain logged in until logout.

The minimal interface reduces distractions and provides a smooth authentication experience.

Product Listing Page

The Products Page displays the complete inventory available in the online store. Product information is generated dynamically through JavaScript using the product dataset stored in data.js.

Each product includes:

Product Image

Product Category

Product Price

Stock Status

Wishlist Button

View Details Button

Category filter buttons enable users to browse products based on specific categories such as AirPods, Chargers, Bluetooth Speakers, Earbuds, Smart Watches, and Gaming Accessories.

The filtering process is performed entirely through JavaScript without refreshing the webpage.

Category Filtering

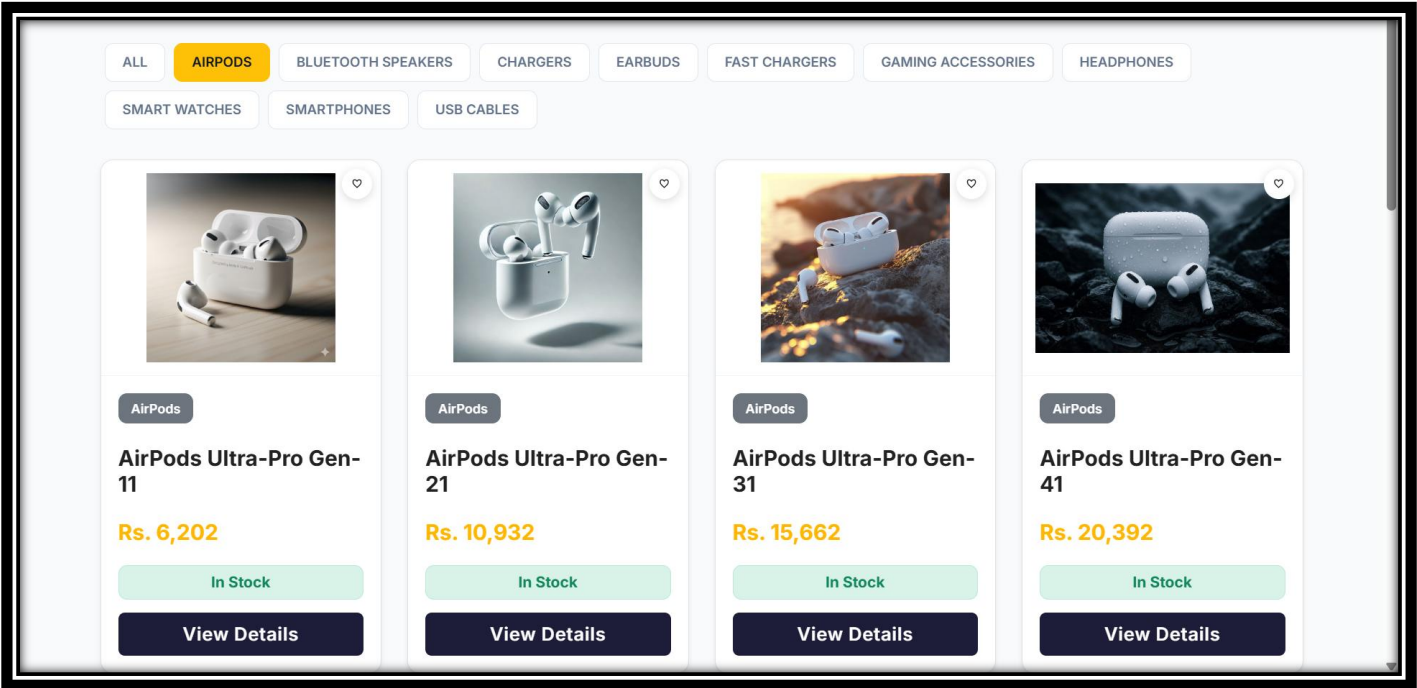

Product Category Filtering

Category filtering improves the shopping experience by displaying only products belonging to the selected category.

When the user selects "AirPods," JavaScript filters the dataset and updates the interface instantly. This client-side filtering reduces unnecessary page reloads and provides faster navigation.

The active category button changes color to indicate the currently selected filter.

The filtering algorithm iterates through the product array and displays only matching products, improving usability for customers searching for specific product types.

Product Details Page

Product Details Module

The Product Details page provides complete information about the selected product.

Information displayed includes:

Large Product Image

Product Category

Product Name

Product Price

Available Stock

Product Description

Add to Cart Button

The page retrieves the selected product dynamically using its unique product ID. JavaScript searches the product array

and populates the interface without requiring a backend database.

This detailed view enables customers to examine products carefully before making purchasing decisions.

Add to Cart Functionality

Add to Cart Module

The Add to Cart feature is one of the most important components of the K.AQSA Electronics Store. It enables customers to temporarily store products they wish to purchase before completing the checkout process. This improves the overall shopping experience by allowing users to compare products, modify quantities, and review their selections without making an immediate purchase.

When the customer clicks the "Add to Cart" button from the Product Details page, the selected product is automatically stored inside the shopping cart using JavaScript Local Storage. This allows the cart data to remain available even after refreshing the browser page.

The shopping cart page displays complete information about each selected product including:

Product Image

Product Name

Product Category

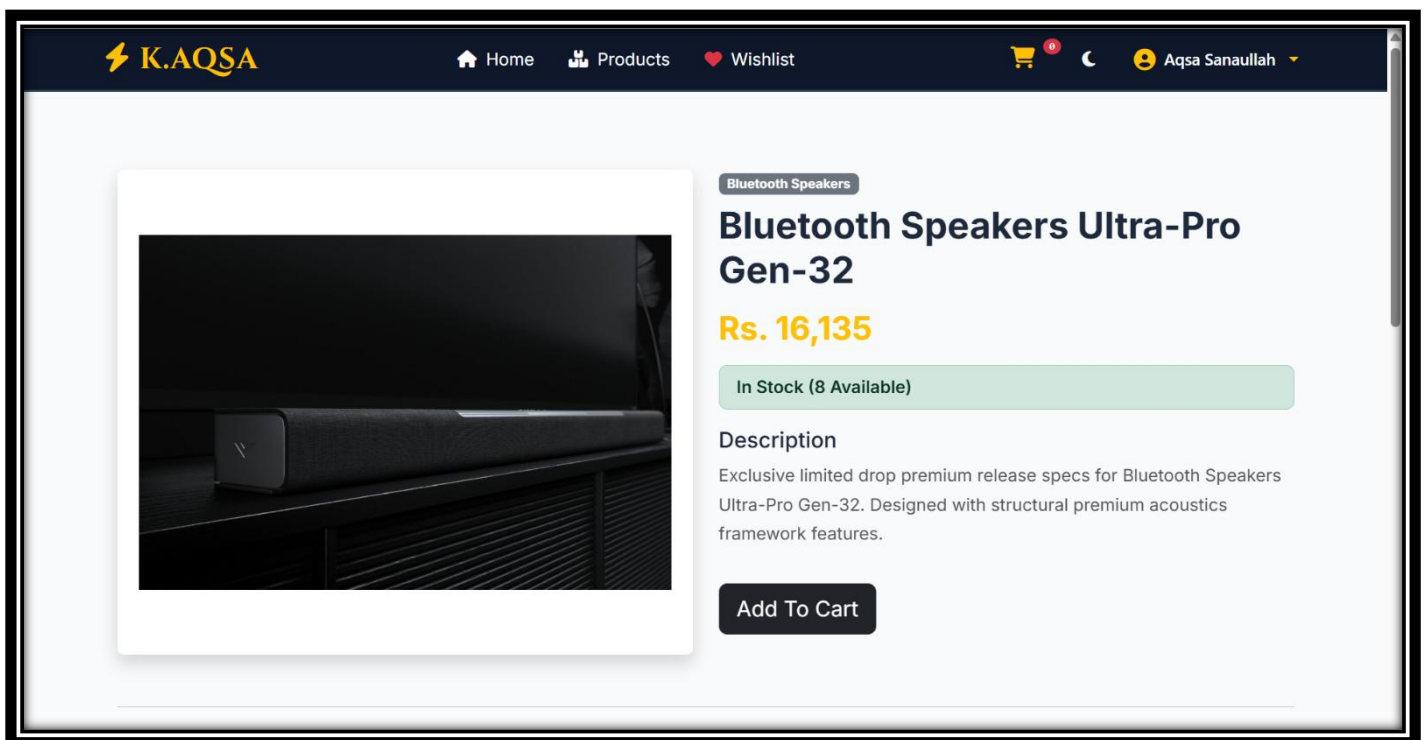

Unit Price

Quantity

Total Price

Remove Button

The cart automatically calculates the total amount payable by summing all selected products. If a product already exists in the cart, its quantity is increased instead of creating duplicate entries.

FEATURES

Add multiple products

Quantity management

Automatic total calculation

Remove product option

Persistent Local Storage

Real-time cart badge updates

Proceed to Checkout Page

Checkout Module

The Checkout Page represents the final purchasing stage of the e-commerce application. It summarizes all products selected by the customer and displays the final amount before order confirmation.

The checkout interface has been designed to remain clean, organized, and user-friendly. Customers can carefully review all products before confirming their order.

The checkout page includes:

Customer Order Summary

Product List

Quantity Details

Individual Product Price

Grand Total

Proceed Button

Cancel Button

The total bill is calculated dynamically using JavaScript, ensuring complete accuracy without requiring manual calculations.

Once the customer clicks Proceed to Checkout, the application validates the order and initiates the logistics process.

Checkout Process

Customer reviews products.

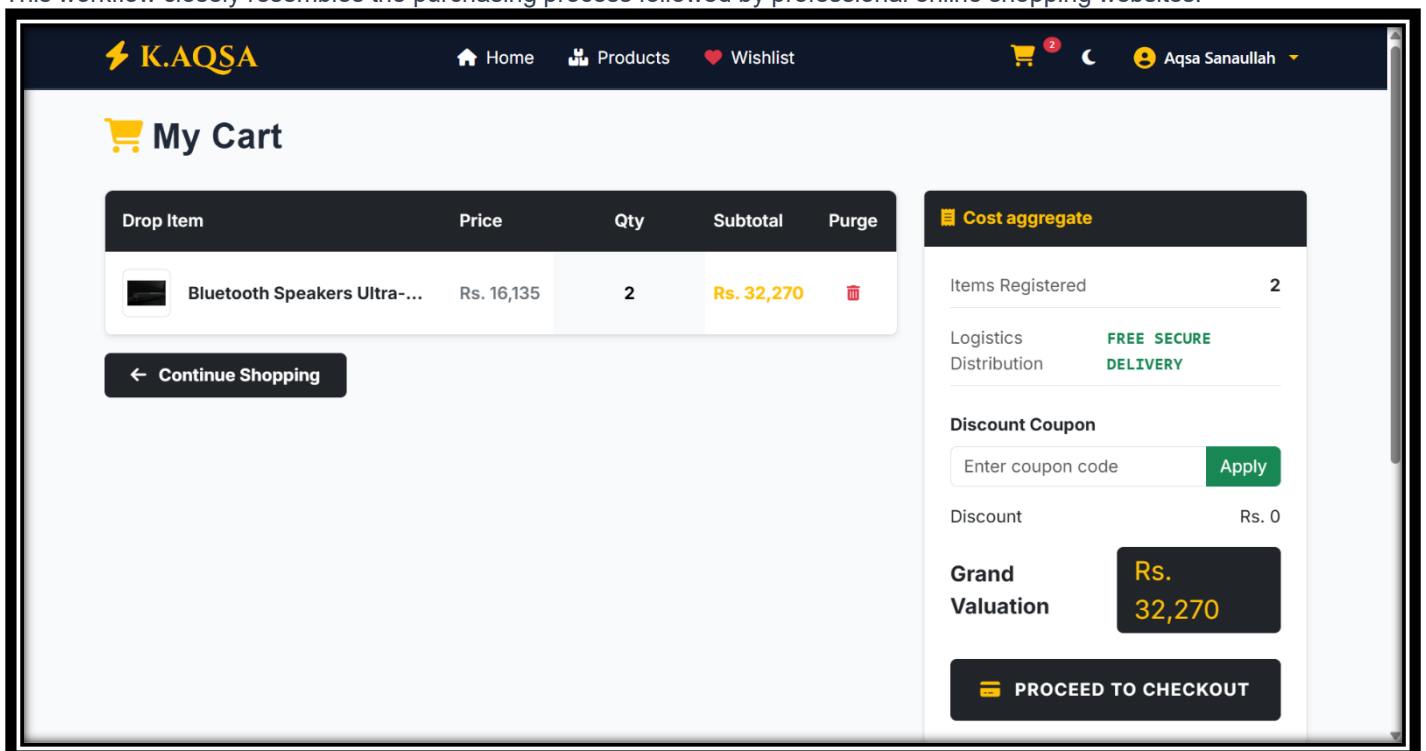

JavaScript calculates total price.

Cart validation is performed.

Order confirmation begins.

Logistics sheet is generated.

This workflow closely resembles the purchasing process followed by professional online shopping websites.

Logistics Management Module Once the customer confirms the purchase, the application generates a Logistics Handover Sheet. This page represents the internal shipping documentation used before dispatching customer orders.

The Logistics Handover Sheet contains complete shipment information required by the delivery department.

Displayed information includes:

Order ID

Customer Name

Shipping Date

Product Count

Delivery Status

Dispatch Confirmation

Shipping Address

Total Payment

This module simulates a real warehouse management system where each confirmed order is transferred from the sales department to the logistics department for packaging and delivery.

Benefits

Order tracking

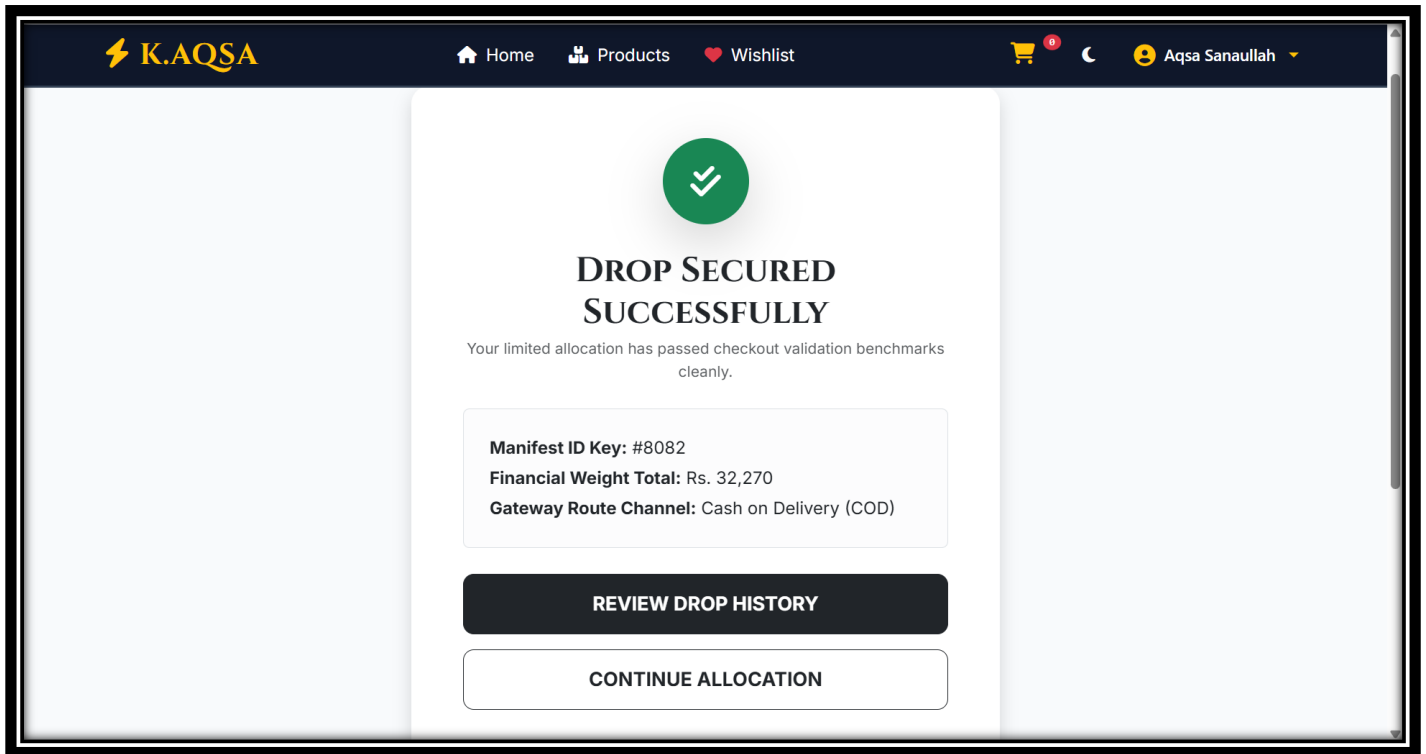

Shipment verification

Delivery preparation

Inventory confirmation

Logistics documentation

The logistics module demonstrates how front-end systems can imitate real-world e-commerce operations.

Registration Success Notification

After completing all required registration fields successfully, the application displays a Registration Successful confirmation message.

This notification informs the user that their account has been created successfully and they may now access the system using their login credentials.

The success message improves user confidence by providing immediate visual feedback after registration.

The validation process checks:

Empty Fields

Email Format

Password Matching

Required Information

Only after all validation rules are satisfied does the system display the confirmation notification.

Advantages

Better User Experience

Instant Feedback

Reduced Registration Errors

Improved Interface Usability

This module demonstrates proper client-side validation techniques using JavaScript before storing user information.

DATABASE

The project uses SQL Server database.

Main tables include:

Users

Products

Categories

Cart

Wishlist

Orders

OrderDetails

Entity Framework Core manages database operations using DbContext.

MVC ARCHITECTURE

The project follows MVC Architecture.

Model

Contains:

Product Model

Category Model

Order Model

User Model

Models communicate with SQL Server using Entity Framework Core.

View

Views display information to users using Razor Pages.

Examples include:

Home

Products

Cart

Checkout

Wishlist

Controller

Controllers process user requests.

Examples include:

HomeController

ProductController

CartController

WishlistController

CheckoutController

AdminController

FEATURES

The website provides the following features:

User Registration

User Login

Product Search

Product Categories

Wishlist

Shopping Cart

Quantity Selection

Checkout

Cash on Delivery

Order Confirmation

Results

The developed website successfully performs all major e-commerce operations.

The user can:

Browse products

Add products to cart

Update quantity

Checkout successfully

Receive order confirmation

All information is stored securely in SQL Server.

Conclusion

The K.AQSA E-Commerce Website successfully demonstrates the implementation of an online shopping system using ASP.NET Core MVC. The project follows MVC architecture, provides secure data management using Entity Framework Core, and offers a responsive user interface. The system fulfills all basic e-commerce requirements including product browsing, shopping cart, checkout, and order management.
